Introduction to Analysis Services

Learning about Analysis Services

Stacia Misner www.pluralsight.com

Overview

- Business Intelligence Queries
- Architecture Options
- Database Development
- Development, Management, and Client Tools

Business Intelligence Queries

- Summarized data for specified period of time
 - What were total sales for last 3 years?
 - What was profit margin last year?
- Comparative data for multiple categories or time periods
 - Did sales increase this year as compared to last year?
 - What was profit margin by product category last year?
- Consolidated data from various source systems
 - How do sales volumes for top 10 customers compare to call center volumes for the same customers?

Relational Queries versus OLAP Queries

Problems with relational queries

- Resource contention
- Unreliable access to historical data
- Inconsistent application of business rules
- Data structure results in slower, more complex queries

Benefits of OLAP queries

- Separate data source reduces resource contention
- Easy access to historical data
- Consistent application of business rules
- Data structure results in faster, simpler queries

Architecture Options

Prototype

- One-time extraction of data for proof of concept
- No additional infrastructure needed to maintain solution

Personal or team use

- No formal data mart (simple data, low data volumes)
- Maintain solution with periodic processing

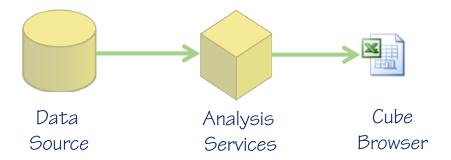

Organizational use

- Data mart/data warehouse in place
- Extract-transform-load processes to update DM/DW
- Partition management

Prototype

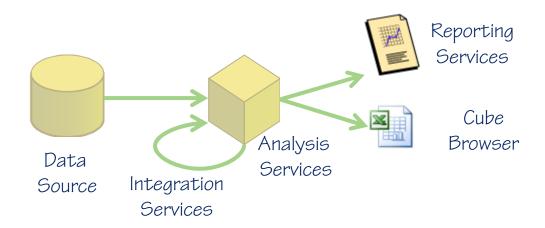

- Data Source
- Analysis Services
- Cube Browser (e.g. Excel 2007 or higher)

Personal or Team Use

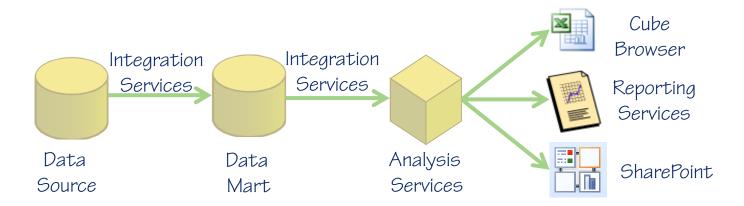

- Data Source
- Analysis Services
- Integration Services
- Cube Browser / Reporting Services

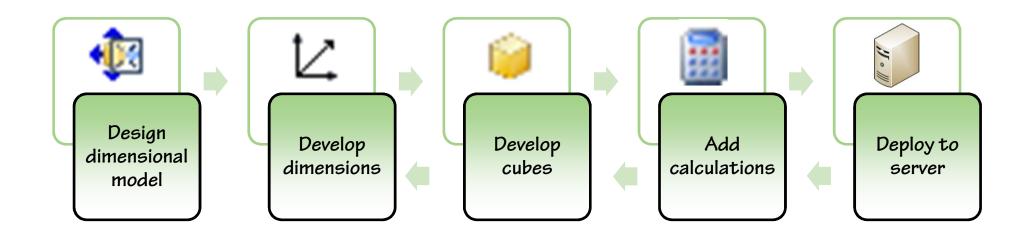

Organizational Use

- Data Source
- Analysis Services
- Integration Services
- Cube Browser / Reporting Services / SharePoint

Database Development

Role

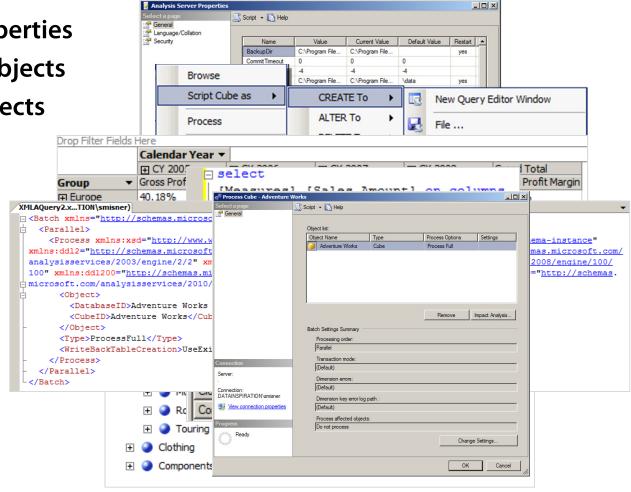

ROLE file

SQL Server Management Studio

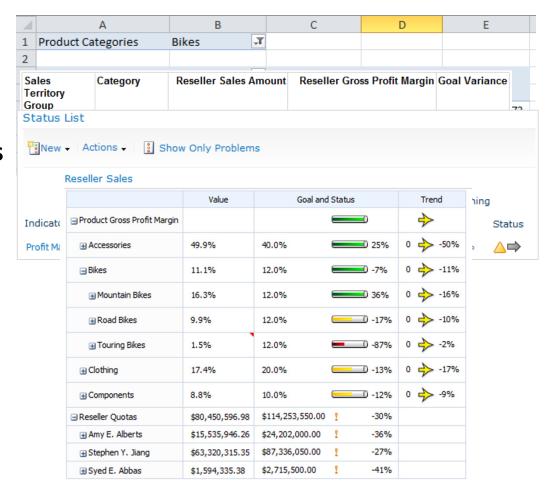

- Query data
- Execute scripts
- Processing objects

Client Tools

- Excel
- Reporting Services
- SharePoint
- PerformancePoint Services

Summary

- Business Intelligence Queries
 - Relational queries versus OLAP queries
- Architecture Options
 - Prototype, personal or team use, organizational use
- Database Development
 - Design dimensional model, develop dimensions and cubes, add calculations, deploy to server
- Development, Management, and Client Tools
 - Business Intelligence Development Studio
 - SQL Server Management Studio
 - Excel, Reporting Services, SharePoint, PerformancePoint
